

# CISO as a Service

CommSec's Chief Information Security Officer or CISO as a Service help executives, security and technology teams safeguard information assets while supporting business operations with augmented cyber expertise to reduce business risk, signal commitment to data security and enhance overall security posture.

## What is a CISO & why do you need one?

A CISO is an executive-level company leader who is responsible for maintaining digital security and managing a company's information. Developing a strategy for handling a company's information is no easy task, which is why the CISO role requires knowledge of:

- Information Regulations
- Implementation of security policies
- Regular security updates to minimize the risks of cyber threats and attacks

The CISO role also deals with risk management, advising on the risks versus the benefits of working with new technologies and collaborating with other companies. In today's digital age, all companies can benefit from a solid information security strategy, and a CISO is the expert who can develop one for your company.

## Our CISOs

CommSec's team of experts includes experienced CISOs from a variety of industries who can strengthen your existing staff, set strategic objectives to support business-critical technology demands and balance IT administration, as well as establish clear communication with the board of directors, investors and government agencies.

Whether you are looking for an interim CISO, a resource to support your CISO or a longer-term arrangement, CommSec's CISO as a Services provide the leadership you need, when you need it.

You can rely on our CISOs to have the technical expertise, business acumen and communication skills to make an immediate difference. Our experts have served in a broad range of industries for companies of various sizes and will know how to align information security strategies with your company's unique needs and challenges.

## Services and offerings include:

- Setting or directing privacy and security policies, standards, procedures and guidelines
- Managing and directing information security teams
- Engaging with executive management
- Running risk assessments on operational security
- Providing threat intelligence and manage enterprise security
